

Luca Remigio

Luca Remigio, born in 1971, architect specialising in exhibit design, temporary and commercial architecture, lives and works between Milan and Moscow, but works all over the world, from the United States to the Far East. In his travels he always looks with curious eyes at the diversity behind techniques styles and cultural specificities; thus, storing up a variety of emotions and interests that he brings back into his design concepts and projects.

He interprets and imagines clients' requests and ideas without letting without letting his own perspective take over, instead creating architectural solutions and design projects that become an integral part of his clients' experience and image.

Philosophy Place of emotions

A team of **architects** and **creative designers**, imagine, design, and realize technical solutions shaping the client's image to exclusive and contemporary figures.

Starting from the dialogue with the client, they conceive concepts that give value to identities and brands by using locations and architectures

that reflect clients' wishes and desires. A creative journey born from the passion of Remigio Architects for raw and natural materials. Research, learnings, and constant experimentation develop into manufactures and architectural solutions that transform residential, industrial, and commercial spaces into functional and emotional angles dedicated to representing their owner and its surrounded.

Raw Materials our passion

High-quality raw materials and natural materials mark every work of Remigio Architects, which makes use, right from the of design, of the unparalleled craftsmanship, all Made in Italy, of skilled local craftsmen specialised in working with wood stone and iron.

A close-up photograph of a person's hand using a tool to shape a piece of metal. The metal has a series of wavy, concentric lines, suggesting it's being formed into a specific shape. The background is dark and out of focus, showing a workshop environment.

Research, training and experimentation

A joinery alternates traditional workmanship to modern techniques, while a workshop moulds iron, transforming it into unique workmanship.
